- a. ones
- b. thousands
- c. tens

Place Value Bell work

ANSWERS

1. Complete the following statement.

- a. **Digits** are mathematical symbols that are arranged in a specific order to represent numeric values. There are ten different digits in our number system: **0 1 2 3 4 5 6 7 8 9**.
- b. It is the position of each digit within a number that determines its **place value**.

2. Write T for true or F for false

- a. We use commas to separate periods of a number, and also use a decimal point to define the location of the ones place. **T**
- b. The ones place is just to the right of the decimal point. **F**

Multiple Choices

3. Write the whole number 149 in expanded form.

- a. 14,900
- b. $1000 + 400 + 90$
- c. **$100 + 40 + 9$**

4. Write the whole number 481 in words.

- a. four thousand, eighty-one
- b. **four hundred eighty-one**
- c. four thousand, eight hundred

5. Determine the place value of the digit 3 in the whole number 131.

- a. ones
- b. thousands
- c. **tens**
