PreAlgebraCoach.com Variables with Dr. Seuss

## VARIABLES with Dr. Seuss

## Students will be able to:

Understand variables and their usage in a context.

Key Vocabulary:

- Variables
- Mental Math

## VARIABLES with Dr. Seuss

## SAM'S DINER

Green Eggs ..... \$2. 25
Regular Eggs ..... \$2.00
Ham ..... 
\$1. 50
Bacon  ..... \$1.25
Small Drink \$0.75
Large Drink ..... \$1.00
Today's Special ..... \$4. 25
(Green Eggs, Ham, Large Drink)

## VARIABLES with Dr. Seuss

## Ticket \#1

$$
G+H+S
$$

- What was ordered?
- How much is the bill going to be?

## VARIABLES with Dr. Seuss

## Orders:

Ticket \#2:
$\boldsymbol{X}+\boldsymbol{G}+\boldsymbol{S}$
Ticket \#3:
$2 G+B$
Ticket \#3:

$$
E+3 H+2 L
$$

## VARIABLES with Dr. Seuss

## Ticket \#2

$$
X+G+S
$$

Do you think this order was made one item at a time?

What is the total amount for the bill?

How do you know?

## VARIABLES with Dr. Seuss

## Ticket \#3

$2 G+B$

- What did this person order and what did it cost?
- Prove it!

$$
\begin{gathered}
\text { Ticket \#4 } \\
E+3 H+2 L
\end{gathered}
$$

- What did this person order and what did it cost?
- Prove it!

## VARIABLES with Dr. Seuss

## Large Orders

Ticket \#5: $\mathbf{2 ( G + H )}$

Ticket \#6: $(\boldsymbol{G}+\boldsymbol{S})+\mathbf{2 H}$

Ticket \#7: $X+\mathbf{3}(E+L)$

Ticket \#8: $\mathbf{3}(\boldsymbol{E}+\boldsymbol{B}+\boldsymbol{L})+\mathbf{2 X}$

## VARIABLES with Dr. Seuss

## Ticket \#5

## $2(G+H)$

- What was ordered?
- What is the cost?
- How did you figure that out?
- How else could we calculate the total price of this order?

## VARIABLES with Dr. Seuss

## Ticket \#6

## $(G+S)+2 H$

- What was ordered?
- What is the cost?
- How did you figure that out?
- How else could we calculate the total price of this order?

## VARIABLES with Dr. Seuss

## Ticket \#6 <br> $X+3(E+L)$

- What was ordered?
- What is the cost?
- How did you figure that out?
- How else could we calculate the total price of this order?

## VARIABLES with Dr. Seuss

## Ticket \#8

$$
3(E+B+L)+2 X
$$

- What did they order?
- How much will their bill be?
- How do you know?
- What is another way to calculate the cost?

## VARIABLES with Dr. Seuss

Suppose you have $\$ 10$ to spend. What are some possible orders you can make? Get as close to $\$ 10$ as you can without going over.

## VARIABLES with Dr. Seuss

## "Messed Up" Orders (What is Missing?)

Ticket \#9: $\quad \underset{\sim}{ } \boldsymbol{E}+\boldsymbol{L}=\$ \mathbf{6 . 0 0}$

Ticket \#10: $\quad X+3 \underbrace{}_{\omega}=\$ 6.50$

Ticket \#11: $\quad \underbrace{3} \boldsymbol{G}+\boldsymbol{H}=\$ \mathbf{1 0 . 5 0}$

Ticket \#12: ${\underset{\sim}{3}}^{3}+\boldsymbol{G}+\boldsymbol{B}=\$ \mathbf{6 . 5 0}$

## VARIABLES with Dr. Seuss

## Ticket \#9

$$
\omega^{3} E+L=\$ 6.00
$$

- How many orders of eggs and a large drink was ordered on this ticket?
- How do you know?

## VARIABLES with Dr. Seuss

## Ticket \#10

$$
X+3 \xi_{0}=\$ 6.50
$$

- What did they order 3 of?
- How do you know?

## VARIABLES with Dr. Seuss

## Ticket \#11

$$
\xi_{0} G+H=\$ 10.50
$$

- How many orders of green eggs are on this ticket?
- How do you know?

## VARIABLES with Dr. Seuss

## Ticket \#12

$$
\omega^{3}+G+B=\$ 6.50
$$

- What was ordered on ticket \#12?
- How do you know?
- Are there other possibilities for the order? If so, what are they?

## VARIABLES with Dr. Seuss

## What would be a real-world situation for this equation?

$$
2 x+4=24
$$

- What is the missing information?
- What would the solution of the equation be?
- How did you determine it?
